

DON'T LET DIABETES

LEAD TO HEART PROBLEMS

The PROMINENT Study is researching a new investigational medication for people with type 2 diabetes, elevated triglycerides (a type of fat in the blood), and atherosclerosis, also known as hardening or clogging of the arteries, to see if it can reduce the risk of heart attacks and other heart-related problems.

PROMINENT
STUDY

You may be eligible if you:

- are at least 18 years of age
- have a diagnosis of type 2 diabetes
- have moderately high triglycerides
- have atherosclerosis

Qualified participants will receive study medication and study-related care at no cost.
